# 1 INTRODUCTION

## 1.1 Project Overview

Job recommendation is an important task for the modern recruitment industry. An excellent job recommender system not only enables to recommend a higher paying job which is maximally aligned with the skill-set of the current job, but also suggests to acquire few additional skills which are required to assume the new position.

In this work, we created three types of information networks from the historical job data: (i) job transition network, (ii) job-skill network, and (iii) skill co-occurrence network. We provide a representation learning model which can utilize the information from all three networks to jointly learn the representation of the jobs and skills in the shared k-dimensional latent space.

In our experiments, we show that by jointly learning the representation for the jobs and skills, our model provides better recommendation for both jobs and skills. Additionally, we also show some case studies which validate our claim.

To develop an end-to-end web application capable of displaying the current job openings based on the user skillset.

The user and their information are stored in the Database. An alert is sent when there is an opening based on the user skillset.

 Users will interact with the chatbot and can get the recommendations based on their skills. We can use a job search API to get the current job openings in the market which will fetch the data directly from the webpage

### 1.2 Purpose

An excellent job recommender system not only enables to recommend a higher paying job which is maximally aligned with the skill-set of the current job, but also suggests to acquire few additional skills which are required to assume the new position.

To create a software that filters the job based on the skillset of the candidates who are seeking for the job.Then that filtered job is recommended for that candidates based on their skillset.
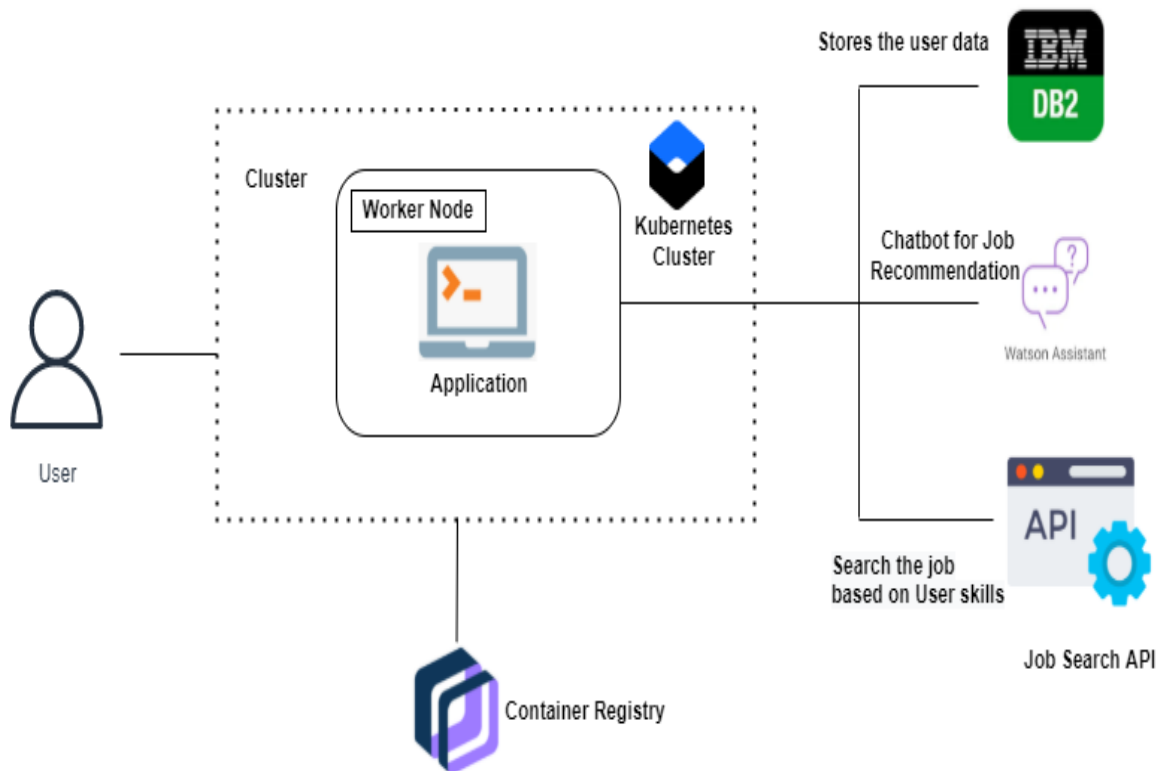

## 2  LITERATURE SURVEY

### 2.1 Existing problem

"Job Recommendation based on Job Seeker Skills. Jorge ValverdeRebaza ,Ricardo Puma ,Paul Bustios ,Nathalia C. Silva. : First Workshop on Narrative Extraction From Text  co-located with 40th European Conference on Information Retrieval  March  2018"

In this ,when a candidate submits his/ her profile at a job seeker engine.

Their job recommendations are mostly suggested taking their academic qualification and work experience into considerations.

A survey of job recommender systems, Shaha Alotaibi ,International Jounal of Physical Sciences July 2012"

The recommender system technology aims to help users in finding items that match their personnel interests, it has a successful usage in e-commerce applications to deal with problems related to information overload efficiently.
This article will present a survey of e-recruiting process and existing recommendation approaches for building personalized recommender systems for candidates/job matching

A Research of Job Recommendation System Based on Collaborative Filtering: Cheng Yang,Yingya Zhang,Zhixiang Niu, 2014 Seventh International Symposium on Computational Intelligence and Design, December 2014"

It analyze the candidate's resume and the companies' recruitment guidelines.
To compare and come to a better conclusion upon finding the best suited candidates for the job

**2.3 Problem Statement Definition**

Having lots of skills but wondering which job will best suit you? Don't need to worry! We have come up with a skill recommender solution through which the fresher or the skilled person can log in and find the jobs by using the search option  or they can directly interact with the chatbot and get their dream job

To develop an end-to-end web application capable of displaying the current job openings based on the user skillset.  The user and their information are stored in the Database.  An alert is sent when there is an opening based on the user skillset. Users will interact with the chatbot and can get the recommendations based on their skills. We can use a job search API to get the current job openings in the market which will fetch the data directly from the webpage

## 3 IDEATION & PROPOSED SOLUTION

### 3.1 Empathy Map Canvas
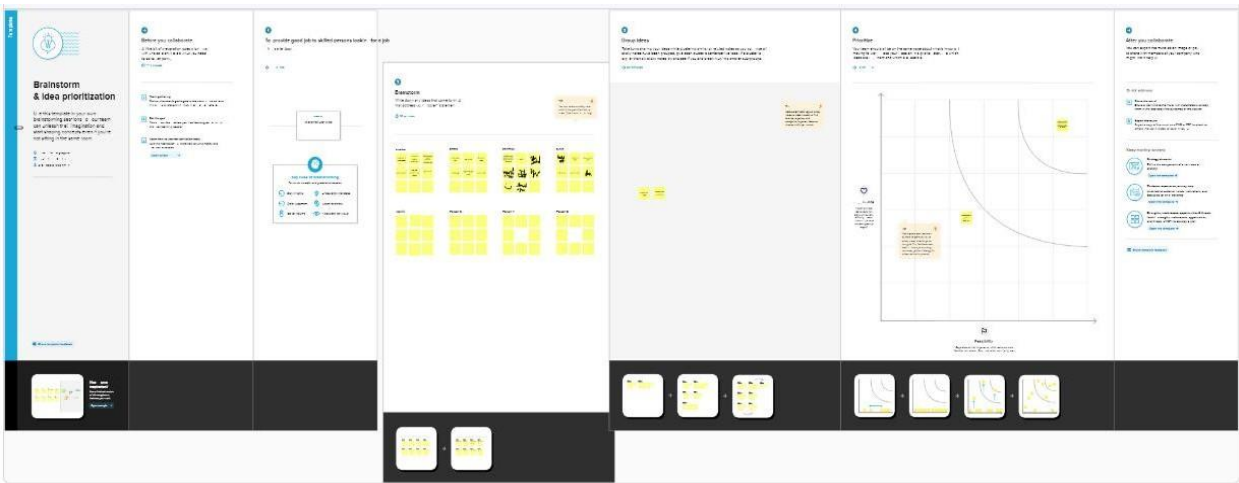

| 1. | Problem Statement (Problem to be solved) | Having lots of skills but wondering which job will best suit you? Don't need to worry! We have come up with a skill recommender solution through which the fresher or the skilled person can log in and find the jobs by using the search option or they can directly interact with the chatbot and get their dream job. |
|----|------------------------------------------|----|
|    |                                          | To develop an end-to-end web application capable of displaying the current job openings based on the user skillset. The user and their information are stored in the Database. An alert is sent when there is an opening based on the user skillset. Users will interact with the chatbot and can get the recommendations based on their skills. We can use a job search API to get the current job openings in the market which will fetch the data directly from the webpage. |

| 2. | Idea / Solution description | The contributions of this work are threefold, we: i) made publicly available a new dataset formed by a set of job seekers profiles and a set of job vacancies collected from different job search engine sites ii) put forward the proposal of a framework for job recommendation based on professional skills of job seekers iii) carried out an evaluation to quantify |
| --- | --- | --- |
| | | empiíically the recommendation abilities of two state-of-the-art methods, considering different configurations, within the proposed fssramework. We thus present a general panorama of job recommendation task aiming to facilitate research and real-world application design regarding this important issue. |
| 3. | Novelty / Uniqueness | The best position are suggested to any person according to her skills.While the position of known profiles are assumed |

**1.1 Problem Solution fit**

| CUSTOMER SEGMENT | CUSTOMER LIMITATIONS | AVAILABLE SOLUTION |
|---|---|---|
| Who is our customer? Customers who are searching jobs with suitable skills | • Not having enough money for survival<br>• Do not have place to show their skills to recruiters | Using online sites for searching jobs which only includes their qualifications not showing their skills and also taking interviews in off campus will not provide enough opportunities to be hired at their desired company |
| **PROBLEMS AND PAINS**<br><br>Existing job searching websites not provide enough opportunities to be hired by reputed companies. | **PROBLEM ROOT/ CAUSE**<br><br>Existing solution will not provide enough opportunities for our customer to be hired,and show their skills to recruiters and this leads to poverty and also causing to lose dignity in society due to unemployment | **BEHAVIOUR**<br><br>Customer can install our app from social media app stores and fed their details about their skillset and continue to monitor the application to get job recommendation from our app |
| **TRIGGERS TO ACT**<br>Seeing their friends getting jobs by using our job recommendation app<br><br>**EMOTIONS**<br>Getting hope by seeing the results and success stories of those who are already used our app got hired | **OUR SOLUTION**<br>Having lots of skills but wondering which job will best suit you? Don't need to worry! We have come up with a skill recommender solution through which the finder or the skilled person can log in and find the jobs by using the search option or they can directly interact with the chatbot and get their dream job.<br>to develop an end-to-end web application capable of disclose the current job creation based on user skillset. The user and their information are stored in the Database. An alert is sent when there is an opening based on the user skillset, Users will interact with the chatbot and can get the recommendations based on their skills. We can use a job search API to get the current job creation in the market which will fetch the data directly from the webpage | **CHANNELS OF BEHAVIOUR**<br>**Online**<br>Getting installed our app<br><br>**Offline**<br>Recommending our app to their friends for developing our app |

## 2 REQUIREMENT ANALYSIS

### 2.1 Functional requirement

**Functional Requirements:**

Following are the functional requirements of the proposed solution.

| FR No. | Functional Requirement (Epic) | Sub Requirement (Story / Sub-Task) |
|--------|-------------------------------|-------------------------------------|
| FR-1 | Sign in / Login | Register with username, password |
| FR-2 | Profile Registration | Register with username, password, email, qualification, skills. This data will be stored in a database. |
| FR-3 | Job profile display | Display job profiles based on availability, location, skills. |
| FR-4 | Chatbot | A chat on the webpage to solve user queries and issues. |
| FR-5 | Job Registration | The company's registration/Description details will be sent to the registered email id of the user. |
| FR-6 | Logout | Use logout option after completing job registration process. |

### 2.2 Non-Functional requirements

**Non-functional Requirements:**

Following are the non-functional requirements of the proposed solution.

| FR No. | Non-Functional Requirement | Description |
|--------|----------------------------|-------------|
| NFR-1 | Usability | The webpage will be designed in such a way that any non-technical user can easily navigate through it and complete the job registration work. (easy and simple design) |
| NFR-2 | Security | Using of python flask to cloud connect will provide security to the project. Database will be safely stored in DB2. |
| NFR-3 | Reliability | To make sure the webpage doesn't go down due to network traffic. |
| NFR-4 | Performance | Focus on loading the webpage as quickly as possible irrespective of the number of user/integrator traffic. |
| NFR-5 | Availability | The webpage will be available to all users (network connectivity is necessary) at any given point of time. |
| NFR-6 | Scalability | Increasing the storage space of database can increase the number of users. Add some features in future to make the webpage unique and attractive. |

## 3 PROJECT DESIGN

### 3.1 Data Flow Diagrams

**Data Flow Diagrams:**

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

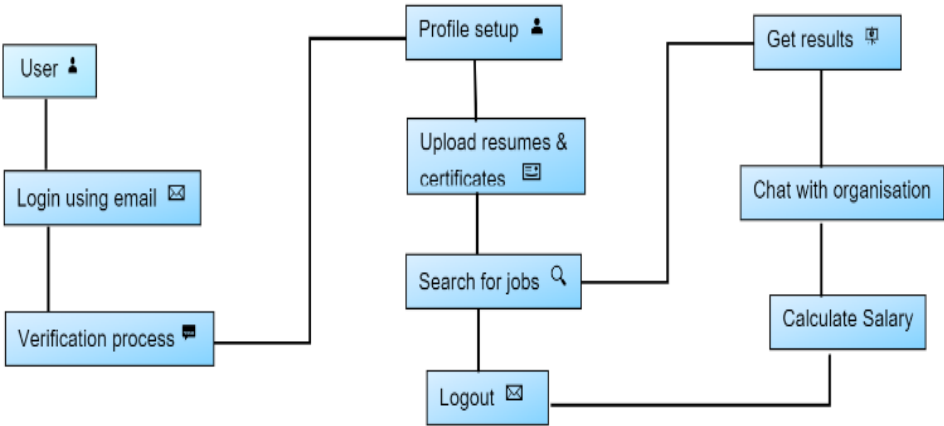

### 3.2 Solution & Technical Architecture

**Technical Architecture:**

**User Stories**

Use the below template to list all the user stories for the product.

| User Type | Functional Requirement (Epic) | User Story Number | User Story / Task | Acceptance criteria | Priority | Release |
|---|---|---|---|---|---|---|
| Customer (Mobile user) | Registration | USN-1 | As a user, I can register for the application by entering my email, password, and confirming my password. | I can access my account / dashboard | High | Sprint-1 |
| | | USN-2 | As a user, I will receive confirmation email once I have registered for the application | I can receive confirmation email & click confirm | High | Sprint-1 |
| | | USN-3 | As a user, I can register for the application through Facebook | I can register & access the dashboard with Facebook Login | Low | Sprint-2 |
| | | USN-4 | As a user, I can register for the application through Gmail | | Medium | Sprint-1 |
| | Login | USN-5 | As a user, I can log into the application by entering email & password | | High | Sprint-1 |
| | Dashboard | USN-5 | As a user, I can access my dashboard after signing in. | I can access my account / dashboard | High | Sprint-1 |
| Customer (Web user) | Access | USN-6 | As a user, I can setup a profile, and basic details by signing in. | | | |
| | | USN-7 | As a user, I will upload my resume, certificates, and other requirements. | I can perform several task in the application | Medium | Sprint-1 |
| Customer Care Executive | Chatbot | USN-8 | As a user, I can seek guidance from the customer care executive. | | High | Sprint-1 |
| Administrator | DBMS | USN-9 | As a administrator, I can keep the applications of your organization relies on running. | I can perform various modifications in the applications. | High | Sprint-1 |

## 4  PROJECT PLANNING & SCHEDULING

### 4.1 Sprint Planning & Estimation

| Sprint | Functional Requirement (Epic) | Use Story Number | Use Story . Task | Story Foints | Priority | Team Members |
|---|---|---|---|---|---|---|
| Sprint-1 | Registration | USN 1 | As a user, I can register for the application by entering my email, password, and confirming my password. | 2 | high | Swetha,Sneka,Sryaprakash, Roshini,Sowmiya |
| Sprint-3 | Access | USN-4 | As a user, I can through cloud | 2 | low | Swetha,Sneka,Sryaprakash, Roshini,Sowmiya |
| Sprint-1 | Login | USN-5 | As a user, I can log into the application by entering email & password | 1 | High | Swetha,Sneka,Sryaprakash, Roshini,Sowmiya |
| Sprint-1 | Job search | USN-6 | As a user, I can view for job | 2 | High | Swetha,Sneka,Sryaprakash, Roshini,Sowmiya |
| Sprint-1 | support | USN-7 | As a user, can I get some assistance like chatbot | 1 | Medium | Swetha,Sneka,Sryaprakash, Roshini,Sowmiya |
| Sprint-2 | notification | USN-8 | As a user, can I get mails as a notification from that app | 2 | Medium | Swetha,Sneka,Sryaprakash, Roshini,Sowmiya |

## 4.2 Sprint Delivery Schedule

| Sprint | Total Story Points | Duration | Sprint Start Date | Sprint End Date (Planned) | Story Points Completed (as on Planned End Date) | Sprint Release Date (Actual) |
|---|---|---|---|---|---|---|
| Sprint-1 | 18 | 6 Days | 24 Oct 2022 | 29 Oct 2022 | 18 | 29 Oct 2022 |
| Sprint-2 | 27 | 6 Days | 31 Oct 2022 | 05 Nov 2022 | 27 | 05 Nov 2022 |
| Sprint 3 | 29 | 6 Days | 07 Nov 2022 | 12 Nov 2022 | 29 | 12 Nov 2022 |
| Sprint-4 | 14 | 6 Days | 14 Nov 2022 | 19 Nov 2022 | 14 | 19 Nov 2022 |

## 4.3 Reports from JIRA
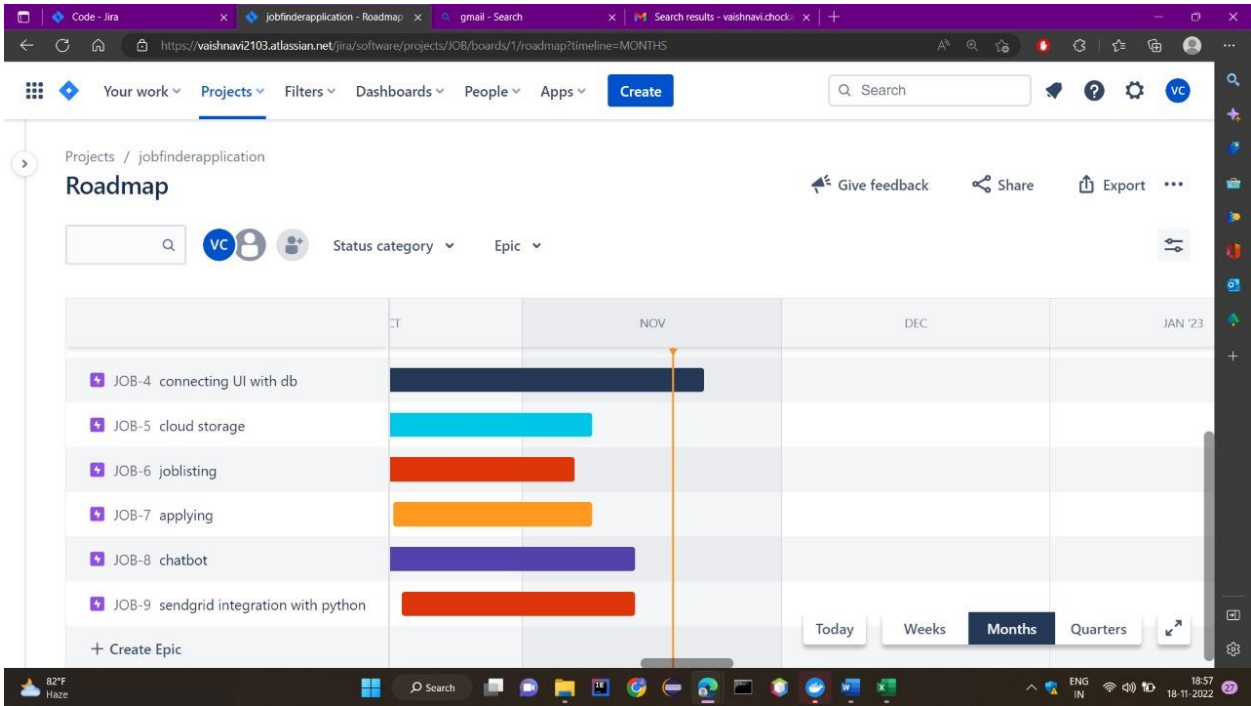

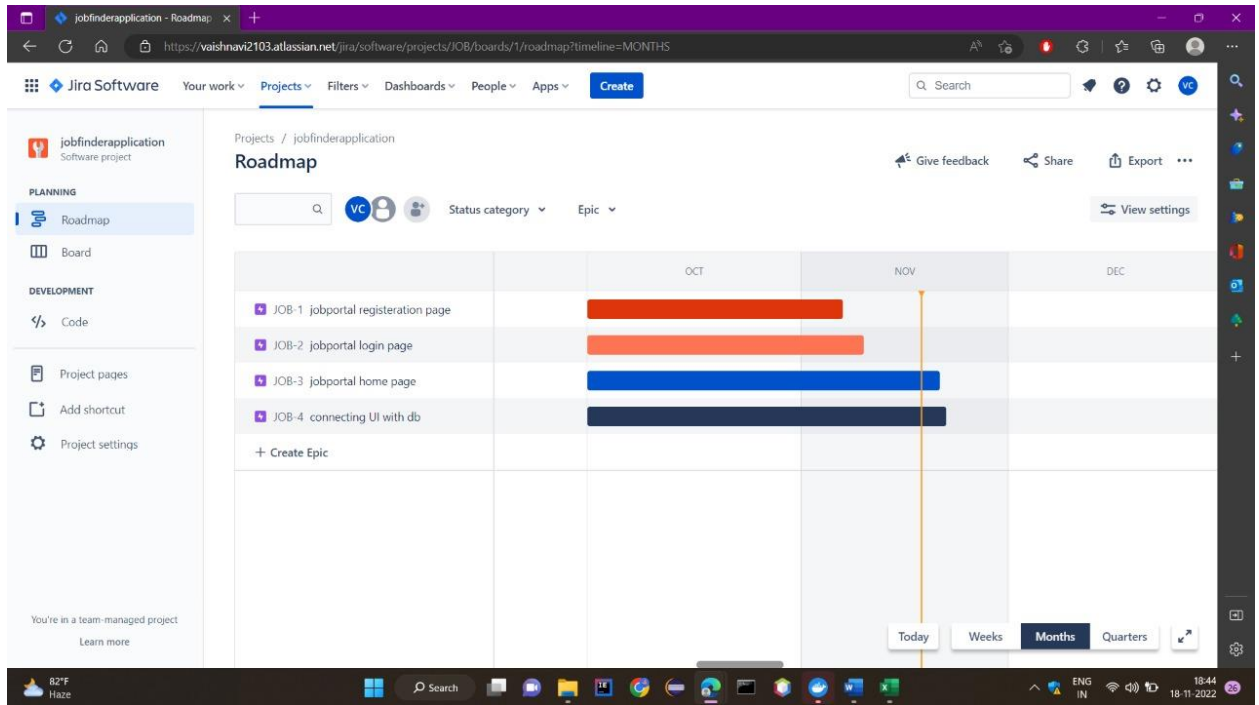

## 5  CODING & SOLUTIONING

### 5.1 Feature 1

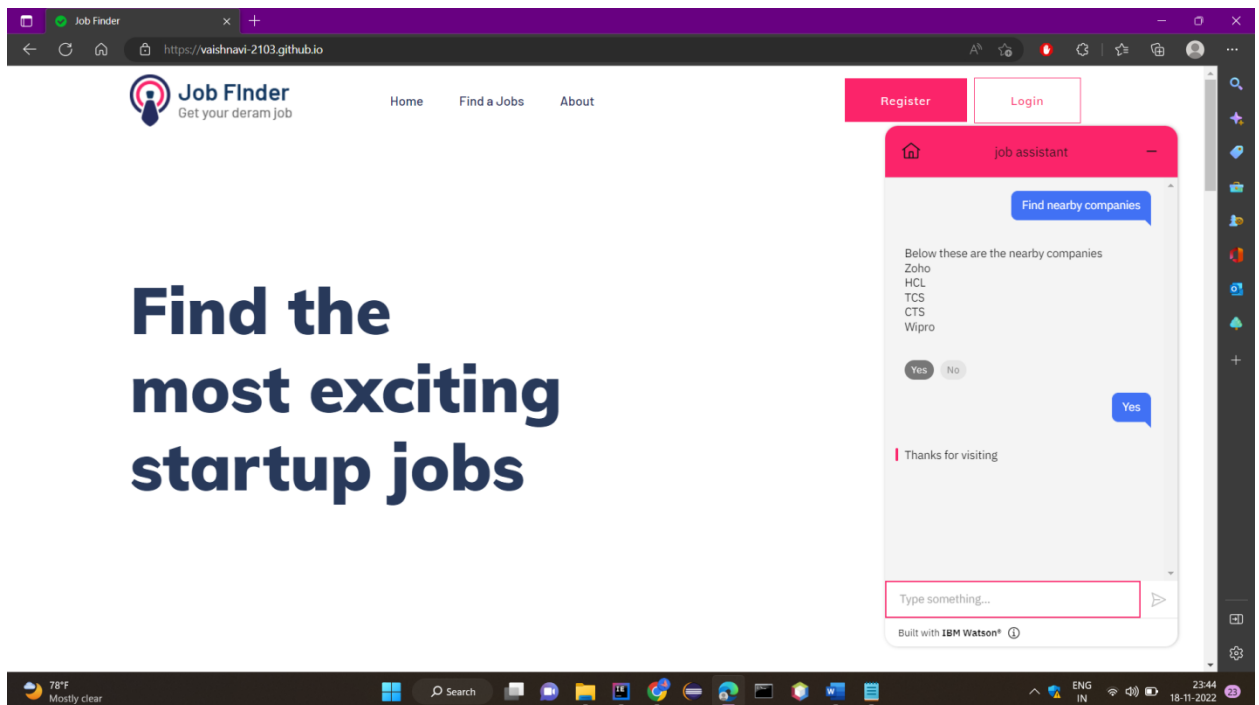

The software has an In-built "Chat Bot" which can help assist with ongoing queries and provide fast and effective solutions to user problems which may occur and also redirect to

management attention if need be there any complications the customer service will be available 24*7 to assist in case of any controversial issues arise

### 5.2 Feature 2

In this project we have created the dashboard page to view the jobs available and to make ease to access the website

- They communicate information quickly.
- They display information clearly and efficiently.
- They show trends and changes in data over time.
- They are easily customizable.
- The most important widgets and data components are effectively presented in a limited space.

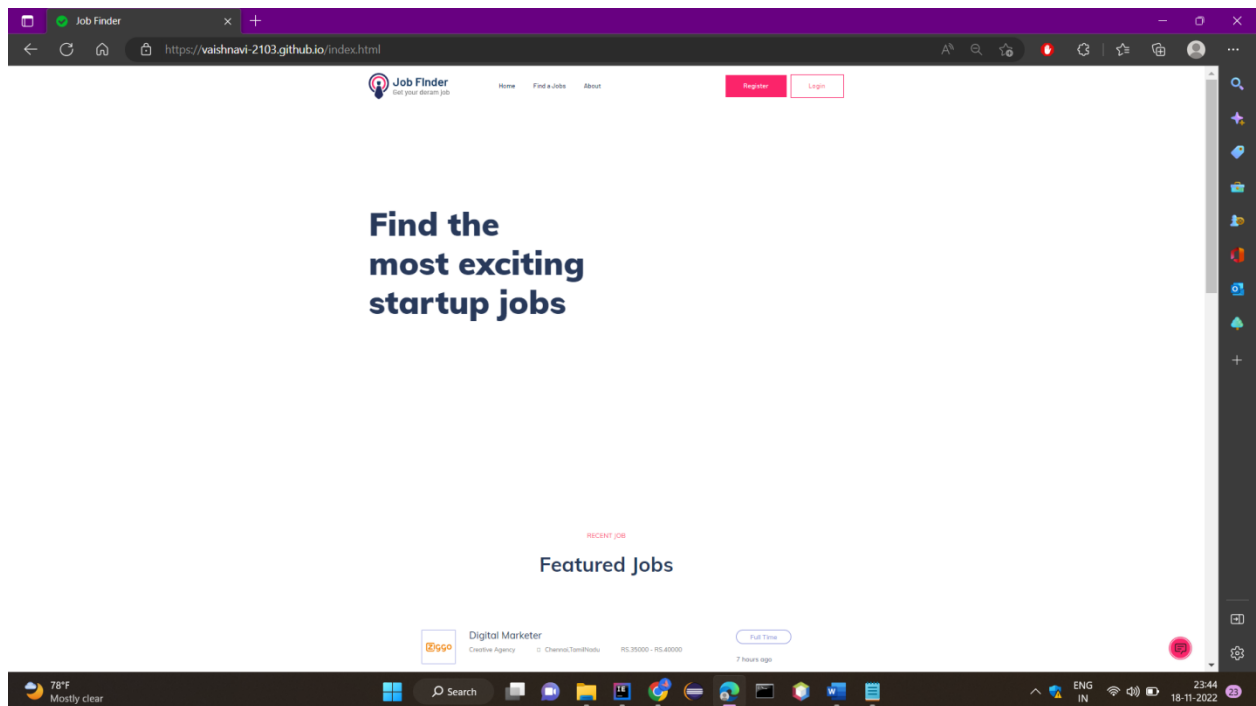

## 6   TESTING

### 6.1 Test Cases

Software testing is the process of evaluating and verifying that a software product or application does what it is supposed to do. The benefits of testing include preventing bugs, reducing development costs and improving performance.

**This Software is tested and evaluated successfully.**

### 6.2 User Acceptance Testing

Purpose of Document

The purpose of this document is to briefly explain the test coverage and open issues of the Inventory Management System project at the time of the release to User Acceptance Testing (UAT)

User Acceptance Testing is carried out in a separate testing environment. A change, an update, or a new feature is requested and developed. Unit and integration tests are run. All seems to be in order. But then, after it is released to the public, serious problems appear. Rework and retesting are not the most expensive consequences when that happens. Loss of reputation is.

## 7 RESULTS

### 7.1 Performance Metrics

Based on the two types of user recommendations mentioned above, we analyze the

performance of all the techniques mentioned above. The resultant jobs recommended to each

new user are then checked with the job that the user is originally in as per the test dataset. If

the original user job is recommended in the model result, then the model appends 1 for yes

else, it appends 0 for no.

This array of 0's and 1's thus received is then checked for accuracy by computing the count of

1's from the total user predictions

Among all the models made with the incorporation of different similarity metrics,

the cosine similarity based job recommendation system model outperformed rest of them

all. The metrics used to analyse the model performance are: accuracy, precision, recall and

F1-score.This is because cosine considers the existence of duplicate terms while computing

similarity.Also, computationally, cosine has low complexity and ease over handling spare

data vectors since only non-zero dimensions are considered.

Upon analyzing the result table we observe that the short-comings of some similarity measures upon recommending top 5 and highest-score based job recommendations as even upon achieving high . similarity scores is due to the fact that users are seen to have different jobs than the ones recommended  by the models, thus resulting in 6–10% error rates.

## 8  ADVANTAGES

- The model doesn't need any data about other users, since the recommendations are specific to this user.

- This makes it easier to scale to a large number of users.

- The model can capture the specific interests of a user, and can recommend niche items that very few other users are interested in.

## DISADVANTAGES

- Since the feature representation of the items are hand-engineered to some extent,this technique requires a lot of domain knowledge. Therefore, the model can only be as good as the hand-engineered features.

- The model can only make recommendations based on existing interests of the user.

- In other words, the model has limited ability to expand on the users' existing interests

## 9  CONCLUSION

In this project, Content-Based Filtering and Collaborative Filtering of recommendations have been compared. Additionally, an aggregation plus recommender system has been devised.

Content-Based Filtering recommends the results based on matching the personal preferences of the user with the given document whereas collaborative filtering recommends based on the preferences of fellow users. On evaluating both of these methods, it was concluded that a

hybrid system of both of these overcomes the limitations of both of them and increases the efficiency of ranking. Problems of cold start, sparse database, scalability, and lack of trend recommendation have been eliminated. The proposal is to design a Job Recommender system that prioritizes quality over quantity. While there are websites and job listing portals already recommending jobs to job seekers based on their profiles, this research on aggregate quality recommendations has been achieved by crawling selectively, overcoming the limitations. A fully functioning user interface was developed to combine everything together to give the user a seamless experience**.**

## 10 FUTURE SCOPE

Future works in the case of Personalized Job Recommendation Systems are the utilization of the user-preferred location to get job recommendations based on jobs in organizations established in nearby areas. This can be done by extracting the latitudes and longitudes of the user-preferred location and computing the euclidean distances between the latitudes and longitudes of the organization location.

This filters out other jobs that fall far from the user-preferred location and gives a more accurate job recommender

As part of the future work, we plan to usefeatures of similar candidates and jobs

insequence information. As of now,recommendation using similar candidates an jobs forms part of non-machine learning basedrecommendations and the initial result seempromising. Finally, it would be interesting toextend our methodology to other recommendersystems
